

BRIDGING THE GAP BETWEEN
BUSINESS & TECHNOLOGY

Senior Network Engineer Job Description

ISD's Senior Network Engineer has a broad technical mandate, one which ranges from resolving complex technical support requests from our clients, to defining and consistently implementing standard client networks and processes, to assisting the sales team with defining the technical scope of client engagements. The focus of this job is on driving consistent network architectures and service delivery methods. The senior engineer is seen as a thought leader and mentor within ISD, and comes to the job with deep technical knowledge, a broad range of technical experience, and a desire to teach and guide ISD engineers.

Skills/Requirements

The ideal candidate will be experienced in a wide variety of network technologies, including:

- VMware certified in design, implementation, and support
- All Microsoft Desktop and Server Operating Systems
- Active Directory and Group Policy Configuration
- Powershell scripting
- Microsoft Exchange, Outlook, Office 365
- Microsoft SQL
- Wireless Access Point and Wireless Card Setup in secure environments
- Router and firewall configuration
- VPN, Remote Access and Terminal Server configuration
- Network design and implementation experience, including working knowledge of IP addressing protocols, LAN and WAN configurations
- Spam reduction software/hardware
- Ability to interact with clients in a professional, friendly, positive and honest manner
- Ability to assess technical needs for potential new client engagements
- Participate in pre-sales project definition meetings with ISD sales team and clients

Key Competencies

- Exceptional critical thinking and problem solving skills
- Excellent written and verbal communication skills

- Superlative planning & organizational skills
- Attention to detail
- Ability to meet deadlines

Educational Requirements

- College degree
- 5+ years as a network engineer
