

OneTEAM Business Assurance Server Backup and Disaster Recovery

- ProductiveTech's OneTEAM Business Assurance Service provides a completely automatic and worry free approach to server backups that includes near real-time onsite backups plus daily off-sites; No tapes, no drives, no effort.
- The backup device provides business continuity necessary in today's world. It will take over the duties of your server should it fail, reducing or eliminating downtime. Ready-to-go replacements can be shipped in the event of a catastrophe.
- ProductiveTech provides all equipment, daily monitoring, plus maintenance and restore services at an exceptional monthly price!

How does it work?

ProductiveTech provides and installs our OneTEAM Business Assurance Device at your facility where backups will be performed several times daily, providing an increased amount of restore points when compared to traditional tape backups.

Data is securely sent offsite daily from the Business Assurance Device for a completely hands free approach. All aspects of the on-site and off-site solution are monitored 24x7.

There are advanced restoration options like file and folder level restorations, Exchange message and mailbox recovery and even complete restorations to dissimilar hardware in the situation your existing server needs replacing.

Should your server fail, this unique device can quickly be configured to function as a virtual server to take over the responsibilities of your existing downed server. These features would allow your firm to continue to function even after a disastrous event. Even if the original device was destroyed, a new one would be quickly on its way to your office or temporary location.
