

## SERVICE BRIEF

# Hosted Desktop

Access your desktop and applications from anywhere and reduce the costs associated with desktop hardware and management.

## Virtualize your Desktop

*Let HillSouth host your desktop environments from our datacenter and help take the worry out of your IT.*

With HillSouth Hosted Desktop, your entire office can be virtualized, granting your employees access anywhere to their desktop and applications. By centralizing your

desktop environment, you can access your files and programs from anywhere on virtually any device with a web browser, and the cost of management and support is minimized.

Using our Hosted Desktop Platform, all of your applications and data are stored in our Network Operations Center. With unparalleled physical and technological security mechanisms you will never have to worry about data security again.

## Virtualization and Thin Clients

*Let HillSouth worry about managing the software and updates for your office while reducing your hardware expenses at the same time.*

Virtualizing your office can drastically reduce the cost of operating your business. By moving to the Cloud, you can outfit your entire operation with thin client terminals which only need the internet and minimal hardware to access our service. The minimal hardware offers several cost saving

benefits. The cost of powering the thin clients are considerably less than a traditional workstation. This power savings will reduce your company's overhead expenses. The lifecycle of thin clients are longer than traditional PCs since they will not need to be upgraded to accommodate the processor load from new applications. Most of all, your company will save by not having to maintain an in house desktop support team or spend a considerable amount taking care of these PCs.

## Mobility

*Empower your workforce to be more productive, on the road or next door, and make sure they have the tools they need.*

With HillSouth Hosted Desktop and an internet connection, you can access your company applications, and documents from anywhere. From home or on the road, and from virtually any device with a browser, you can access all of your desktop applications and documents securely without sacrificing functionality.

## Data Security

*Never worry about a laptop being stolen and company data being lost.*

With a Hosted Desktop Environment, data is safely stored in our state-of-the-art datacenter. You will never have to worry about losing a laptop with critical company documents; your data is never on the physical device.

## Features

- Mobile access from anywhere
- Our Datacenter keeps your desktop environments and applications always accessible
- Use your tablet or mobile device to access your data and fully-functioning applications
- Your data is safe with our unparalleled security
