

# The value of unified communications.

PCPC experts will help your team to never miss a beat.

## Voice + Video Conferencing

Did you know that a great business phone system may be more relevant today than ever? From modern VOIP handsets to mobile “soft phones”, unified communications can keep your team connected, and business flowing. Move calls from device to device while maintaining voice, video and messaging! Never miss a connection.

## Messaging + Sharing, etc.

Share screens, notes, files, and annotations, before, during and after a conference call. Record calls for replay. Chat by text in real time during calls. Get caller ID, call forwarding, voicemail, sign-on links to increase attendance and continuity. Take advantage of in-depth reports and tracking analytics.

## Implementation + Setup

PCPC is at the cutting edge in providing desktop to table communication solutions. We handle the research and analysis of your team’s needs, then work directly with the vendors as your single contact. We’re committed to providing the right unified system tailored to and scaled for your business.

## Choosing the right service

Organizations with 15 or less users are a good fit for Greenlink or Intermedia Unity solutions, which work with Cisco, Polycom, and Yealink devices. Larger organizations are a fit for Momentum Telecom solutions with VOIP, collaboration, and SIP trunking for hybrid systems with legacy PBX installations.

## Call for a consultation today!

We offer solutions that scale with your growth.
