# Celera Off-Site Data Protection

Bulletproof your Data Protection with the Highest Industry Standards in an All-In-One Backup & Business Continuity Solution

## Celera Off-Site Data Protection

*Is your data secure? Would it survive a disaster? Can you afford to take a chance?*

The most critical assets of any business in regards to technology are data and information. We take the protection of information seriously and strive to build a comprehensive strategy for data backup, business continuity and disaster recovery for our clients.

With Celera Off-Site Data Protection, you can have peace of mind knowing that all of your data is secure and protected. Our platform encrypts, compresses, de-duplicates and replicates your data off-site to our secure datacenters throughout the country. Data can be restored at a moment's notice, even after a major disaster.

## Don't Underestimate the Importance of your Data

*Your company's data is one of its most valuable assets.*

Many businesses don't have a reliable enough backup solution and are not doing enough to protect their most valuable asset - their data. The cost of restoring data after equipment has malfunctioned, without a reliable backup in place, is astronomical and never guaranteed. In fact, many businesses that experience a major data loss go out of business within a year.

## Image Based Backup and Recovery

*Backup Jobs contain a snapshot of an entire server reducing restoration times by up to 90%*

Traditional Backup Systems backed up all of the files, folders and databases on a server to a tape, disk or over the Internet. The downside of only doing a "file Level" backup is that in the event a full server restore is necessary, the server Operating System and components must be installed before the restore can begin.

With Image Based Backup and Recovery, the backup job contains an entire "snapshot" of the server and a restore job can begin immediately. This can save hours and in some cases days of costly downtime. Off-Site Data Protection Appliances

## Cloud Continuity and Recovery

*In the event of a disaster, rest assured knowing that your data and applications are available on our secure cloud.*

Celera's Cloud Continuity and Recovery can mean the difference between being able to access your data in the event of a disaster or emergency or not. In many cases, even with a complete backup of critical data in hand, a business does not have an available resource to restore that data to, especially in the event of a disaster or emergency.

Using our secure cloud platform your business servers and environment can be restored to our secure cloud within hours, providing employees access to critical data and applications while production systems are brought back online.

### Benefits

- Protect and maintain the security of critical business information
- Dramatically reduce the loss of productivity with traditional backup systems
- No physical tapes to manage
- 24x7x365 Backup Monitoring
- Access your critical data in the event of a disaster or event with off-site data storage

### Features

- Backup data off-site to our secure Datacenters
- Image Based Backup allows recovery of an entire server with a single job
- Restore deleted or corrupt files when needed within minutes
- Database support for Microsoft SQL, Exchange, Oracle and most others
- Data encryption at rest and during transport with military grade encryption providing the highest level of security
