PRIVACY CEILING BLOCKER TILE™

Basement renovations, office spaces, even mixed use commercial spaces all present challenges that sometimes make a suspended grid ceiling the only choice. Mechanical ducts, plumbing and wiring conduits, uneven joist, and sloped joist are several reasons where hiding what's there is the best option.

Grid system ceilings are too light to help in the creation of privacy between spaces; the only traditional options are very expensive ceiling tiles with sheetrock as the backer, or foil backed tiles which are touted as high performance noise blockers but really aren't even capable of bare minimum STC ratings.

We have a simple, very effective solution for all suspended grid ceilings. Available in pre-cut sizes Privacy Ceiling Blocker Tiles are designed to fit directly above your current ceiling tiles. Tested to a STC 26, you can expect immediate improvement in the sound blocking of your grid ceiling.

You do not have to make any modification to your existing ceiling, and you don't have to replace the tiles you already have. This system is simple to install by a maintenance man, or even by yourself.

TECH SPECIFICATIONS

STC:	26
Thickness:	1.25"
Weight:	1 lb/sft or 2 lbs/sft
Fire Rating:	Class A
Size:	24" x 24" and 24" x 48"
Custom Sizes Available

Privacy Soundproof Light Covers (PSLC)

UL Fire Rated Ceilings

UL Ceilings require that all fixtures be covered with a UL Certified light cover. To maintain the fire rating for your ceiling the simplest, cost effective method is to use PSLC. Privacy Light Covers are UL Approved in both commercial and wood frame construction. Simple three piece design goes together in minutes. PSLC's are very easy to modify for electrical or bracket penetrations, and suitable for air supply fixtures; save money and time by using Privacy Soundproof Light Covers.

Soundproofing Penetrations

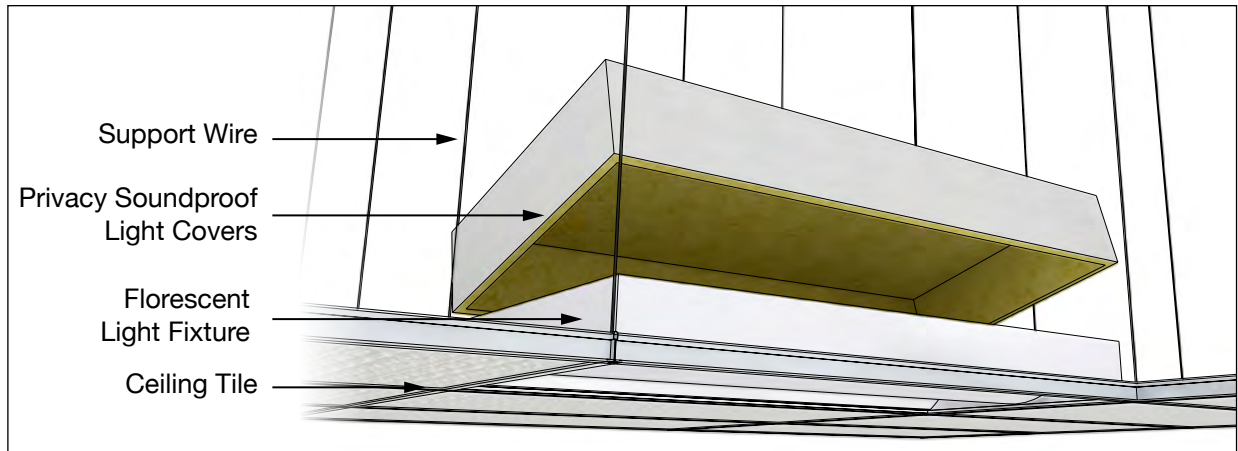

Your soundproof ceiling will only perform as well as the weakest link. Recessed fixtures, speakers and any other penetrations will act as "holes" in the ceiling where soundproofing is concerned. PSLC are a simple, effective way to maintain the sound rating for your ceiling. The same principles apply for sheetrock or drop grid ceilings. Independent testing confirms that the sound rating for a ceiling with no recessed lights will remain the same with cans and Privacy Soundproof Light Covers.

Flexible Sizing

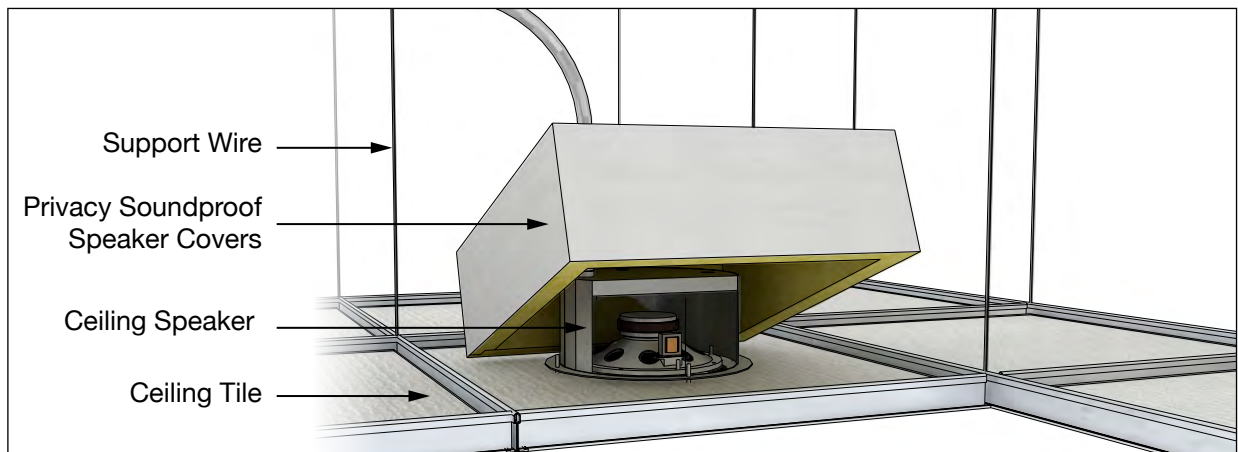

Privacy Soundproof Light Covers are available to fit any fixture up to 24" x 48" at any height. Custom sizes can be accommodated as well. Low profile options are available when height is a concern. When compared to other light covers or field fabrication of drywall boxes the delivered, installed cost of PSLC makes the choice very easy.
