

Remote connectivity. Securely and reliably.

Collaborate globally

More connectivity, more devices, more locations. That's what today's telecommuting workforce demands. Keeping on-site and remote workers connected and productive means finding a way to integrate devices, applications and services within the same network, securely and reliably.

AT&T Network-Based IP VPN Remote Access Services (ANIRA) solves the connectivity challenge by providing highly secure access to critical business applications – regardless of access type, device or location. ANIRA offers the reliability and flexibility that only the unified AT&T Global Network can deliver.

Simplicity and consistency

Decentralize your workforce. Improve efficiencies using one connectivity solution. What's more, you'll gain peace of mind that your employees at home, on the go, or in a satellite office have consistent access to applications and data.

Unmatched business continuity

ANIRA equips you to meet the demands of an ever-changing business climate while helping you accelerate productivity. Scale with ease, ensure enhanced network performance, and provide your workforce with a high definition experience they can trust.

*Connectivity.
Security.
Reliability.*

Benefits

- Accelerate productivity at small offices and mobile devices
- Improve data protection and security
- Enhance business continuity and agility
- Simplify off-site networking and reduce costs

Features

- Consistent application capabilities delivered to small office locations
- Extend roaming and Wi-Fi to remote access users
- Increase the reach and footprint of network-based VPN services
- Narrowband or broadband VPN access for traveling users
- Secure VPN access for small branch locations
