

Discover the value of knowing exactly where your technology vulnerabilities exist and how to resolve them.

Complete IT Assessment

The most comprehensive IT Assessment Available

An ITS Complete IT Assessment is a snapshot of the network status at the time the assessment is run. It will allow you to easily understand any potential risks or vulnerabilities in your network as well as provide a complete asset list and configuration log.

Do it right the first time.

By performing a Complete IT Assessment, ITS will identify any risks that exist in your network. Then you can choose if you need further assistance to help you to prioritize them and to evaluate the best path forward for resolution.

Our assessment generated using industry leading tools, provides useful information about everything connected to the network, and the overall condition of the environment. It provides an overview on a broad range of connected systems, network assets, settings, configuration, installed applications and endpoint security. An Active Directory site diagram is included. The ITS Complete IT Assessment is as powerful as it is easy. It doesn't require major configuration changes or installation of agents to run. We simply need access to a machine on the network running Windows. ITS will then produce a comprehensive report that we will walk through with you.

Recent studies show that 75% of business that experience downtime due to IT problems were found to be a result of some sort of human error. System downtime may be unavoidable but planning for it will help restore operations sooner and mitigate the impact on most businesses.

Risk Summary Report

- ✓ Overall Risk Assessment
- ✓ Overall Risk Score
- ✓ Detailed Report of Issues Detected

Network Management Plan

- ✓ Risk Severity Assessed
- ✓ Recommendations for Risk Resolution Prioritized

Complete Asset Analysis

- ✓ Detection of all Assets Connected
- ✓ Detailed List of Devices
- ✓ Detailed Analysis of Device Operating Systems
- ✓ Server and Workstation Aging Analysis
- ✓ Hard Drive/Storage Analysis

Additional Tools Included

- ✓ Asset Detail Report w/Configurations
- ✓ Migration Readness Assessment
- ✓ Management Style Presentation
- ✓ Ability for Ongoing Change Tracking

Did you know...

- ✓ *IT outages cost SMBs an average of \$1,250/day when their computers are down and that doesn't include the impact on customers.*
