What do you see?

urGoals?

urProfits?

urBusiness?

urCloud.

synergIT

urCloud. ur answer to frustration-free IT.

Clouds are the new "it" in IT. Rather than spending the time and money to service and upkeep applications on every desktop, companies rely on "clouds" on Internet servers to house their applications, supply network capabilities and store files. The challenge with these virtual clouds is the fact that they reside on the Internet. What happens if the Internet goes down? Your business goes down, too. Who do you call if you have a problem? Good luck contacting an Internet supplier. And what about security issues? Having all your information exist virtually creates the possibility of privacy and security problems.

urCloud is a better cloud.
synergIT takes the concept of the virtual cloud and puts it onsite, right in your office. It's your own private cloud, with no worries about Internet security, performance or downtime.

Gain control.
Get out of the IT business and into your business. With urCloud from synergIT, you no longer have to be burdened with the distractions and frustrations of IT administration, back-ups, hardware or access issues. synergIT handles it all. urCloud comes with 24/7 proactive monitoring. That means if there's an IT problem, we manage and fix it – usually before you even know it. It's all done remotely. No phone calls. No downtime. No waiting. Plus, unlike other cloud computing solutions, urCloud is developed specifically for your company, with no reliance on shared networks or Internet security. What's more, you have total control of what goes into urCloud. Employees will no longer be able to take up vital storage space and decrease productivity by downloading software and applications. All software and resources reside in urCloud, and only you decide what goes in.

Save time and money.
For one flat fee per month, urCloud offers a complete IT solution.

There are no upfront costs or capital expenditures. And you may never have to buy another PC or laptop again. synergIT will supply you with the hardware you need. With no hard drives or moving parts, the "thin clients" we use to replace desktop computers last longer and are a greener solution – using less electricity and saving you money. Plus, time-consuming software upgrades are handled automatically. Better yet, implementation is easy and minimally disruptive.

Increase productivity.
With urCloud, your employees can access their desktops, and all their applications, regardless of their physical location from a remote PC, laptop or mobile device. This great new solution allows for increased collaboration, seamless communication and makes sharing information faster and easier.

Relax.
With urCloud, off-site back-up is included in the service. So if there's ever a disaster like a fire or flood, your information is safe. Better yet, we can have you up and running in hours rather than days. Of course, peace of mind also comes from having manageable and predictable fees, and 24/7 monitoring and support. Perhaps most importantly, you get the world-class experts at synergIT, a team with over 25 years of experience at taking complex systems and deploying them properly. We're the pros who will manage and monitor urCloud. And although no one knows the technology better, we also know the importance of understanding your business and providing solutions that fit your goals and objectives.
