

Creating Connected Communities

Digitel Wireless solutions create flexible, reliable and cost-effective outdoor wireless networks that connect local governments, public safety, private businesses and residences. Our portfolio of turnkey wireless and IP infrastructure solutions form a secure, scalable and high-bandwidth communications systems. The resulting infrastructure ties together a broad range of fixed and mobile applications in urban and rural areas across licensed and unlicensed frequencies.

Municipal Solutions

Digitel Wireless
DESIGN, DEPLOY, CONNECT
With Confidence

"I would recommend Digitel as a wireless integrator. Their skill set is much broader than just wireless and during our project we were fortunate to have the additional expertise at our disposal. For us the real test for a vendor comes when problems arise. A complex project such as ours will have issues, they are just part of the process. Digitel responded to issues as they arose and provided workable solutions."

Marvin Golden , City of Thomasville

The wide variety of RF radio technologies we deploy lets municipalities extend the reach of their public service networks well beyond the range of their existing physical equipment. That makes it easier for government agencies to protect their citizens; work together in a timely, effective manner; and make better informed responses to crisis situations and service problems.

Communities that utilize Digitel Wireless broadband applications dramatically improve their service delivery. This enhanced operating efficiency makes them more attractive to quality economic development and better places to live, work and play.

Digitel Wireless solutions allow you to:

- **Improve collaboration:** *By sharing Information such as video surveillance among on site and off site employees within your agency and with other agencies, you can develop a more coordinated response and collectively make better decisions.*
- **Boost productivity:** *By eliminating unnecessary trips to the office with field services such as electronic citations or environmental code enforcement, you can make existing government services and the use of human and capital resources increasingly efficient.*
- **Foster citizen services:** *By delivering on-demand information and services to citizens, tourists, and businesses, you can promote social inclusion and economic development.*

"The work your team did has been one of the best experiences we have had at Darton. I want to thank your team for a job well done and a job made more enjoyable by your staff because of the way they presented and handled themselves while at Darton College."

*Ashley Coates
Darton College*

By using Digitel Wireless, customers can rely on Digitel's 25 years of communication expertise making it easier for organizations to design and deploy wireless solutions with confidence.

"In 2007, we awarded our wireless project bid to Digitel. From the inception of the project, they have been accommodating, professional and extremely knowledgeable. In my experience, it is rare to engage a company with so many talented individuals; sales, technical, engineering and management. Digitel has shown the City of Kennesaw what "customer satisfaction" should be. No project is ever perfect. There will always be learning along the way but partnering with Digitel was one of the best choices we made. They value our work ethics, our talents, our time and our responsibilities."

Teri K. Chambers, IT Director, City of Kennesaw

Digitel is focused on increasing public safety, security and service effectiveness. Digitel Wireless provides intelligent networking solutions that integrate multiple indoor and outdoor wireless technologies so that government field workers, regardless of their location, can maintain access to vital information, applications, and resources. Digitel Wireless solutions provide innovative ways for governments to conduct business:

Improved Public Safety - A new generation of emergency response and incident management allows forward-thinking public safety agencies like police, fire, and emergency-response to increase inter-agency collaboration and productivity while cutting costs.

Improved Public Services - When mobile workers can enter information and submit reports from the field, the information is available to other people immediately, speeding up and reducing errors in processes such as inspection, permitting, and licensing.

Improved Public Access - Stimulate the local economy—public Wi-Fi access encourages residents and visitors to visit downtown areas more often and stay longer.

Digitel can provide a unique combination of fiber, licensed and unlicensed wireless solutions such as WiFi and Wi-Max technologies to address the specific needs of a community. Digitel has a dedicated team that solely focuses on the strategy to get these projects underway by engaging community leaders, identifying and securing alternative funding opportunities, identifying existing assets and resources, designing, implementing, and providing ongoing operation services for such networks.
