

Envision Cloud Desktops

Product Data Sheet

What are Envision Cloud Desktops?

Envision Cloud Desktops (ECDs) are Windows 7 workstations hosted and centrally managed on cloud servers, and delivered on-demand from our SSAE No. 16 compliant data centers. This means that employee productivity is no longer attached to a local machine, and access to applications, data and files is possible from any Internet-enabled device.

What This Means For My Business?

Fast Provisioning and Scalability

Through a centralized dashboard, IT administrators can, in just a few clicks, create user profiles, assign permissions and deploy workstations and applications on-demand. Whether your organization is rapidly growing, or have remote and seasonal staff, you no longer have to configure workstations and install software one machine at a time

Security of Data and Applications

Because ECDs are hosted on a server and accessed over the internet, they provide a secure workspace that separates business and personal data and has virtually no interaction with the user's local device.

Superior Service

Our team of experts will be there to plan and execute the deployment of ECDs, and also be available 24/7 to answer any questions that come up along the way.

Simple Setup, Easy management

In traditional business environments, your organization can suffer from productivity loss during PC refreshes, replacements, patches and updates. With central management of ECDs, we ensure such disruptions are avoided and that user virtual workstations and applications are up to date.

Lower IT Costs

With data and application hosted on the cloud, virtual desktops help extending the life of local machines. Plus, with our subscription-based pricing model, you to only pay a monthly fee based on the number of users in your business.

Business Continuity

Because your computing infrastructure is safely housed in our data centers, if disaster strikes, your employees only a computer and an Internet connection to be back in business.

How do Cloud Desktops Work?

ECDs use Citrix technology to send a Full Desktop or Application instance over the internet to a Browser that delivers the same Windows 7 experience to a Windows PC, Mac, iPad, iPhone, Android, or any other internet-enabled device you may have.

What User Experience Can I Expect?

An advantage of virtual desktops is the familiar Windows experience. Users can work just like they are used to on their local machines. This includes local printer and USB availability, and keyboard shortcuts. All you need is a reliable broadband internet connection in your office to have a high-definition, seamless user experience from any device.

About Envision Consulting

We are a full-service computer network consulting and integration firm that specializes in providing managed cloud computing services and IT support to small and midsize organizations. The Envision Team has been serving the greater Washington DC area since 2001.
