

Envision helps you implement and manage a powerful, cost-effective backup & recovery solution equipped with encryption tools previously available only to Fortune 500

Ease of Use

Manage Local and Offsite Backups

Choose which data will be stored online and which data will be saved to local storage, eliminating the need for a separate solution for your local-only backups.

Easy Installation and a Quick Start

Set up is fast. And if you have a lot of data to backup initially, we can provide seeding services without tying up available bandwidth.

Automatic Backups

We can schedule your backups to happen whenever you want, as frequently as you want.

Security

Military-grade encryption

Files are secured using 256-bit AES encryption and a private encryption key. SSL technology is used in data transmission. Your data is protected both onsite and over the Internet.

Robust, Flexible Archiving

Data-archiving settings allows historical data to be saved as long as you need and meet applicable compliance standards.

Off-site Storage

Our redundant data centers provide both data protection and scalability. Data is stored in SSAE 16 Type II compliant datacenters with redundant storage, network connections, power and cooling, as well as biometric security and surveillance.

Business Grade

Reporting and Notifications

Know that you're backing up successfully with our logs and reporting. With detailed statistics and information about each file that is backed up or restored, you never have to wonder if your backups really worked.

Multiple Revisions

Store an unlimited number of versions of the same file based on the number of revisions that suits your business needs. Go back to a previous version of your file and never worry about deleting information or overwriting a file by mistake.

WHEN DISASTER STRIKES...
