

Environmental Specialists for the Construction Industry

GEMS is the **ONE CALL Environmental Solutions Provider** who manages all the environmental components of your construction project. Whether planned or in the event of an emergency, GEMS oversees the environmental team of specialists required to meet ALL the project components. Providing the client with ONE POINT OF CONTACT, GEMS manages the team to ensure timelines, budgets & environmental legislation are met.

Did you get onsite to find this after a rain event?

How could you have avoided this?

Could you have prevented project shutdown?

Did you need to perform a fish rescue?

Often GEMS gets the emergency call because:

- A permit wasn't obtained
- There was a changed condition (i.e. unexpected site condition)
- Project site flooding due to a storm event
- Erosion & Sediment Control (ESC) measures failed
- Dirty discharge water entered a creek
- A sewer break occurred next to a watercourse
- Spills containment, clean-up and remediation is required
- A fish rescue is needed
- Work is being performed outside the fisheries window

In the event of an environmental emergency, GEMS:

- Is onsite immediately and can assume the role of Environmental Manager
- Performs a site assessment and determines course of action
- Becomes liaison with the regulatory agencies
- Obtains appropriate permits (many times under accelerated timelines)
- Implements mitigation and remediation measures
- Performs monitoring and inspection to ensure compliance

GEMS is called upon in emergency situations because we are set-up to **respond quickly**, understanding the **contractors' requirements**, contractual obligations, permitting requirements and regulations.
